(54) LIQUID CRYSTAL DISPLAY DEVICE

(57)Abstract:

PURPOSE: To prevent the light leakage generated at the end of a display window near a fluorescent tube and to improve display quality by providing the front surface of a reflection sheet near the side face with colored printing.

CONSTITUTION: The front surface of the reflection sheet 38 near the incident light end face 65 of a light transmission body 37 is provided with colored dot printing parts 1, by which the excess light to induce the light leakage by the colored dot printing parts 1 is absorbed and the light leakage on the screen near the fluorescent tube 36 to impair the display quality is prevented. The width W of the colored dot printing parts 1 is 0.1 to 2mm. Easily printable round dots are used for the dot patterns and are arranged at respectively the same pitch linearly in the major axis direction of the fluorescent tube 36. The dots arranged in the major axis direction of the tube 36 deviate from the adjacent arrays and exist in the intermediate positions with each other in such a manner that the dots are hardly visible on the screen.

(54) 【発明の名称】 液晶表示装置

(57) 【要約】

【目的】 蛍光管近傍の表示窓端部に生じる光漏れを防止し、表示品質を向上する。

【構成】 導光体37の入光端面65近傍の反射シート38の上面に、着色ドット印刷部1を設けた構成。
